C103-05 - Connecting PCs to CMRR servers with RealVNC

Install RealVNC, free version

Connect with putty or ssh client

This will connect a terminal session to a CMRR server.

Start putty, connect to range1.cmrr.umn.edu port 22

Log in with your CMRR user id and password

Start a vncserver session in putty

This will run a desktop session in the memory of the server.

```
vncserver
```

set a password (I usually recommend the same as your CMRR password)

(This will give you a desktop number, e.g. range1.cmrr.umn.edu:23)

```
exit
```

Connect using vncviewer

This will open a graphical desktop on the server.

On your PC, start RealVNC or other vnc viewer

Enter your desktop number (e.g. range1.cmrr.umn.edu:23)

Give your VNC password

Your desktop should open up in a window. You can now start programs

To leave, just close the window (do not choose log out from the menu)

The programs will continue to run in the memory of the server.

You only need to start a session once, you can close and open it multiple times.

If the server is rebooted, your session will end and you will need to start another one.

Killing a VNC session

Log into the server with putty as above

Use the desktop number for your session

```
ps -fu userid
```

```
vncserver -kill :23
```

Changing your vnc password

Start putty and connect as above

```
cd .vnc
```

```
mv passwd passwd.bak
```

```
vncserver
```

This will start a new session (e.g. range1.cmrr.umn.edu:24) and prompt you for a new password

Kill the new, unneeded session (e.g. vncserver -kill :24)

```
exit
```
